

## **Grifols signs a new distribution agreement with CDEX for Spain, Portugal and Italy**

15/04/2008

Grifols has signed a distribution agreement with the US company CDEX, manufacturer of Valimed, an identification system for intravenous medications. The agreement includes the territories of Spain, Portugal and Italy.

Valimed is a pharmaceutical validation system which employs Spectroscopy technology using UV light to identify substances and their concentrations through a signature pattern. This system is innovative compared to other pharmaceutical preparation validation systems currently on the market which are based on visual inspection and weight controls.

Valimed has a library of 150 signatures which are graphic patterns against which a determined intravenous mixture is compared and validated. This system is able to discriminate different concentrations for the same medication.

Valimed is a step forward in pharmaceutical validations and is a perfect complement to our Oncotools line, offering the hospital pharmacist even more tools to facilitate their daily tasks and increase safety in the medication cycle in hospitals.
